AB The invention relates to certain pyrazole based CCK-1 receptor modulators I [wherein R1 (1- or 2-position) = (un)substituted Ph, naphthyl, cycloalkyl, heterocyclyl or alkyl; R2, Ar = (un)substituted Ph, naphthyl, cycloalkyl or heterocyclyl; R3 = H, halo or alkyl; n = 0-2; R4 = H, halo, alkyl or absent when the double bond is present; R5 = COOH, ester, amide or certain triazolylsulf(a/o/i)nyl; etc., or enantiomers, diastereomers and pharmaceutically acceptable salts and esters thereof] and methods for their preparation. For example, condensation of 3,4-dichloroacetophenone with di-Et oxalate in the presence of LiHMDS followed by regioselective cyclization with 4-methoxyphenylhydrazine hydrochloride gave pyrazole II (R = COOEt). This ester was then converted to iodide II (R = CH₂I) via DIBAL reduction, mesylation with methanesulfonyl chloride and substitution with NaI. Enantioselective alkylation of chiral oxazolidinone III (preparation given) with II (R = CH₂I) followed by hydrolysis mediated by H₂O₂-LiOH afforded IV. Sodium salt of IV showed affinity for CCK-1 receptor with pK_i of 8.0. Therefore, I are useful in treating diseases mediated by CCK receptors, such as gastrointestinal and CNS disorders.
